

Simtix Regulatory Readiness Report

Project: Riyadh Sukuk Platform

Industry: Tokenized Assets
Country: Saudi Arabia
Regulator: SAMA

Readiness Score: 74%

Simulation Statistics

Metric	Value
rules_evaluated	7000
rules_passed	5189
rules_failed	1811
critical_violations	417
high_violations	1299
medium_violations	95
low_violations	0
transaction_types	{'Buy Crypto': 85, 'Transfer': 70, 'Card Payment': 67, 'Withdrawal': 76, 'Sell Crypto': 73, 'Bill Pa
risk_distribution	{'Medium': 149, 'High': 215, 'Low': 136}
severity_distribution	{'High': 1299, 'Medium': 95, 'Critical': 417}

Executive Summary

The Riyadh Sukuk Platform demonstrates a moderate compliance readiness score of 74, with particular strengths in AML and KYC modules. However, significant violations, especially in high and critical severity categories, indicate notable compliance gaps, primarily related to transaction monitoring and customer due diligence. The platform's tokenization module shows room for improvement, especially in handling cross-border transfers and high-risk customer activities.

Risk Explanation

The simulation identified 7,000 rules evaluated, with 1,811 failures, including 417 critical violations. The primary risks stem from high-value transactions exceeding AML thresholds, incomplete KYC processes, and unreviewed high-risk crypto activities. These violations pose substantial regulatory and reputational risks, potentially leading to penalties or operational restrictions if not addressed promptly.

Recommendations

- Prioritize remediation of high and critical violations, focusing on high-value transaction monitoring and customer KYC completion.
- Enhance AML monitoring systems to better detect and flag large transactions, especially those exceeding thresholds.
- Strengthen customer onboarding procedures to ensure KYC completeness before engaging in tokenized asset activities.
- Implement stricter controls and review processes for cross-border token transfers and high-risk customer activities.
- Conduct targeted staff training on compliance requirements related to AML, KYC, and tokenization regulations.
- Perform a detailed gap analysis of the tokenization module to improve handling of high-risk and cross-border transactions.
